**Contact:** lois@0-1.gg

**Date:** October 2026

**Entity:** Anticloud FZ LLE, Dubai Free Zone

## Allocation Framework

| Category | % | Purpose |
|---|---|---|
| Engineering | 30% | Hires, compute, infrastructure |
| GTM | 20% | Distribution, UGC, influencer, memetics |
| Legal | 10% | IP prosecution, compliance, contracts |
| Holding / Reinvestment | 20% | Capital deployment, financial returns |
| Owner Discretionary | 10% | Emergency procurement, org flexibility |

## Scenario A — $80M Raise at 10% Equity ($800M Pre-Money Valuation)

| Category | Amount | Specific Deployment |
|---|---|---|
| **Engineering — $24M** | 30% | 8–12 senior hires (ex-labs, ex-Oracle, ex-Google): avg $350K–$500K OTE + equity pool. Compute: |
| **GTM — $16M** | 20% | UGC production studio and paid amplification ($4M). Influencer and platform automation across Link |
| **Legal — $8M** | 10% | USPTO prosecution for KANTOR K5 and AIOSS format ($400K). International IP filing (PCT, EU, U |
| **Holding / Reinvestment — $16M** | 20% | High-return, low-time investments: treasury instruments, short-duration bonds, strategic LP positions |
| **Owner Discretionary — $8M** | 10% | Emergency procurement, strategic acquisitions of distressed AI assets, founder reserve for organiza |

**Total: $80M**

**Implied valuation at raise: $800M pre-money**

**Runway at $80M: 36–48 months to Series A / profitability**

## Scenario B — $1M Raise (Angel / Non-Dilutive Preferred / Design Partner)

| Category | Amount | Specific Deployment |
|---|---|---|
| **Engineering — $300K** | 30% | 1 senior ML engineer hire (6-month contract) + compute credits for PAX fine-tuning on 2–3 regulate |
| **GTM — $200K** | 20% | First enterprise design partner outreach: 2 regulated-vertical pilots (healthcare + finance). UGC see |
| **Legal — $100K** | 10% | USPTO provisional filing for KANTOR K5. BAA template for HIPAA design partners. UAE regulator |
| **Holding / Reinvestment — $200K** | 20% | Capital preservation + infrastructure pre-payment (GPU reservation, bandwidth) to extend runway b |
| **Owner Discretionary — $100K** | 10% | Emergency procurement, event travel (RSA, GITEX Dubai), prototype hardware. |

**Total: $1M**

**Best use case:** First paying design partner, TRL 8 milestone, press and pipeline activation.

**Runway at $1M: 6–9 months to demonstrated enterprise revenue**

## Unit Economics Context

| Metric | Value | Notes |
|---|---|---|
| PAX cost per 1M tokens | $0.08 | T4 GPU, UAE compute rate |
| Enterprise deployment cost | ~$15–50K setup | Hardware + integration |
| Annual license (enterprise) | $18K–$5M | By org tier |
| Gross margin (software) | ~85–92% | After compute, no salaries counted |
| Cost to develop most of stack | ~$0 marginal | Open-source corpus, founder-built |
| PAX training / fine-tuning cost | Low thousands per run | Primary capex item |

Anticloud's development cost structure is structurally near-zero for the software corpus — the primary capex is model training and fine-tuning. Engineering hires accelerate velocity; they do not unlock the technology, which exists already.
